Proposed Title: "KwentoHabi, Inc.: An AI-Powered Platform for Real-Time Narrative Feedback and Plot Consistency"

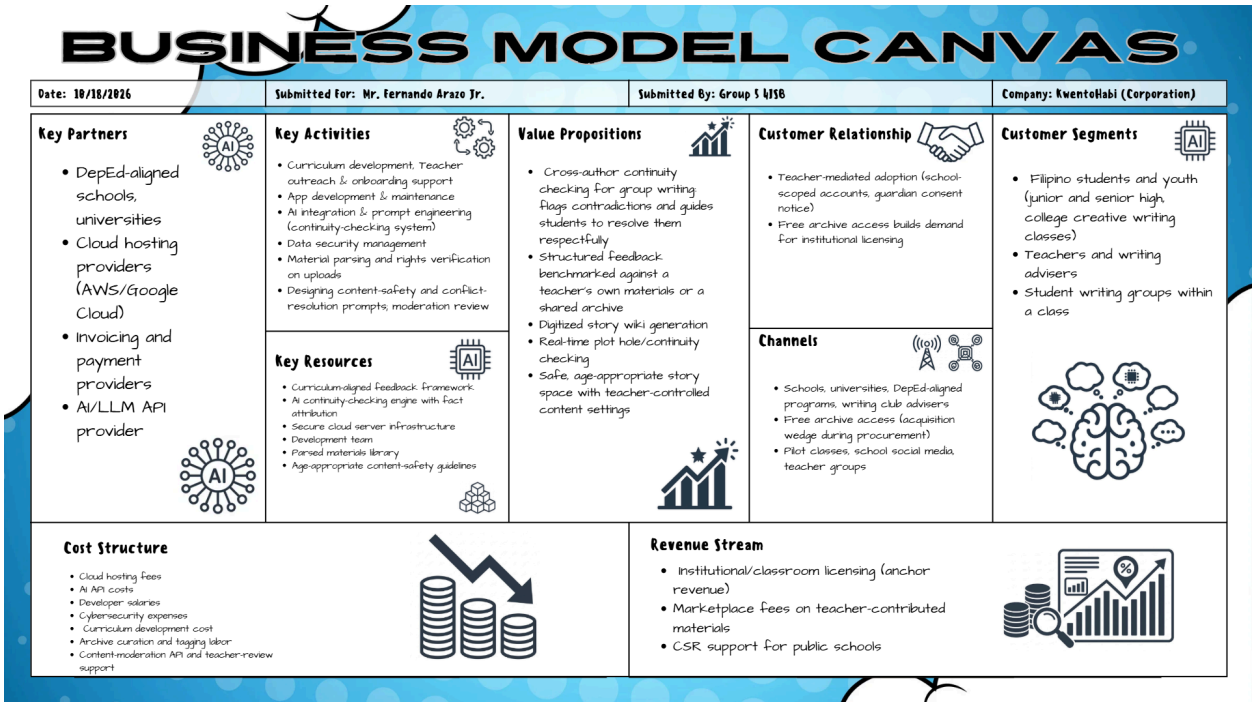

Figure 1: Business Model Canvas (BMC) of LoreWeave

KwentoHabi responds to the Philippines' documented learning poverty crisis: about 91% of Filipino 10-year-olds cannot read and understand an age-appropriate text, the country ranked 77th of 81 in PISA 2022 reading, and DepEd itself describes learners as five to six years behind. Writing feedback is likely where this gap bites hardest, as no single teacher can give every student individualized feedback on narrative consistency, especially in group assignments where individual contributions are hard to grade fairly. KwentoHabi is an AI-enabled platform that benchmarks student writing against a teacher's own materials, builds a living story wiki, and flags plot holes and contradictions in real time, including conflicts between students writing in the same shared story world, attributed by the author. Because its users are Filipino students and youth, it is a safe, age-appropriate story space: teachers set the content level, and when classmates' versions conflict, the platform guides them to resolve it respectfully. Revenue anchors on institutional and classroom licensing, with marketplace fees on teacher-contributed materials and CSR support for public schools as secondary streams. Estimated AI processing

costs of 0.40–1.00 per student monthly remains well below a projected ₱50–100 per-seat licensing fee, while free archive access builds adoption through the typical 6–12 month school procurement cycle. Registered as a Corporation, KwentoHabi, Inc. gives its six co-founders shared stock ownership, limited liability, and the formal legal standing schools expect.
