KwentoHabi, Inc. — BMC Overview & Study Reviewer

Updated to the final canvas

Group 5 — 4-ISB | Everything you should know before the defense

How to use this: Part 1 is the big picture. Part 2 explains each BMC block and why it is there. Part 3 lists numbers and facts to memorize. Part 4 covers risks and honest limits. Part 5 is the safe, respectful story space and how to defend it. Part 6 is a self-quiz. Part 7 is the pre-submission checklist.

Naming note: KwentoHabi (kwento = story, habi = to weave) replaces LoreWeave. The group should confirm the name together and check that it is not already registered. If you keep LoreWeave, swap the name everywhere.

Part 1 — The Big Picture

Proposed title

"KwentoHabi, Inc.: An AI-Powered Platform for Real-Time Narrative Feedback and Plot Consistency" (12 words, within the 15-word limit).

One-sentence summary (memorize this)

KwentoHabi is an AI writing-feedback platform for Filipino students that checks their writing against a teacher's own materials, flags where classmates contradict each other in group stories, and keeps the story space age-appropriate and teacher-controlled.

The problem

- About 91% of Filipino 10-year-olds cannot read and understand an age-appropriate text (World Bank/UNESCO learning poverty brief).
- The Philippines ranked 77th of 81 countries in PISA 2022 reading, with a mean score of 347 against an OECD average of about 476 (OECD).
- DepEd itself described the result as the system being five to six years behind (Rappler, Dec 2023).
- One teacher with 30+ students cannot give individualized feedback on every student's long-form writing. Group writing is harder still, because teachers cannot easily see who contributed what.

Honest limit: PISA and learning poverty measure reading, not creative writing. The claim that writing feedback is where the gap bites hardest is the team's reasoned inference, not a cited fact. Say so if asked.

The solution in plain words

- **Materials-benchmarked feedback:** A teacher uploads a rubric, model text or story template (or picks from a shared archive). The AI checks student drafts against it and produces a report the teacher can grade from.
- **Cross-author continuity checking (the sharpest differentiator):** When students write in one shared story world, the AI tracks facts by author. If Student B contradicts something Student A established, both see the two lines side by side with author and timestamp. The teacher gets a class-level view of what is contested.
- **Individual tools:** Real-time plot-hole and continuity checking, plus an auto-built story wiki.
- **Socratic style:** The AI flags inconsistencies and asks whether they were intentional. It never rewrites the student's text.

- **Safe, age-appropriate story space:** Teachers set the content level; the AI screens for graphic violence, self-harm, sexual content and hate; flagged passages go to the teacher. Conflicts between co-authors are resolved through a guided, respectful process. See Part 5.

The moat (why not just use ChatGPT)

A general chatbot reviews one document in one session. It has no class roster, no rubric, no memory of what a student wrote last month, and no way to reconcile facts across several students. The moat is not the AI model. It is the persistent, multi-author teaching workflow the AI sits inside.

What "innovation" means here (Technopreneurship test)

Pillar	How KwentoHabi answers it
Innovative	Cross-author continuity checking: reconciling facts across different students and sessions is not done by Grammarly, Notion, World Anvil or Scrivener.
Sustainable	Institutional licensing as anchor revenue, supported by marketplace fees on teacher materials and CSR support; AI cost is estimated far below the projected license fee.
Something new	A new application of existing AI: turning continuity checking into a teaching, grading and respectful-collaboration tool, not just an editing tool.
Current society problem	Documented Philippine learning gap and a real classroom grading problem in group work.

Part 2 — The Nine Blocks, Explained

For each block: what is on the canvas, and why it is there. If a panelist points at a block, you should be able to explain the reason, not just read the bullets.

Block	What it says	Why it is there
Customer Segments	Filipino students and youth (junior and senior high, college creative writing classes); teachers and writing advisers; student writing groups within a class.	Students and teachers are where the cited problem lives. Writing groups inside a class are where cross-author checking applies.
Value Propositions	Cross-author continuity checking that guides students to resolve contradictions respectfully; feedback benchmarked on teacher materials or a shared archive; digitized story wiki; real-time plot-hole checking; safe, age-appropriate story space with teacher-controlled content settings.	Leads with the feature no competitor has, then the teaching workflow, then the safety promise that makes it acceptable for minors.
Customer Relationships	Teacher-mediated adoption (school-scoped accounts, guardian consent notice); free archive access builds demand for institutional licensing.	Schools adopt through teachers. School-scoped accounts and guardian notice reflect that users are minors.
Channels	Schools, universities, DepEd-aligned programs, writing club advisers; free archive access (acquisition wedge during procurement); pilot classes, school social media, teacher groups.	Teachers are reached through schools and teacher networks. Free archive access is the wedge during the 6–12 month procurement cycle.
Revenue Stream	Institutional/classroom licensing (anchor); marketplace fees on teacher-contributed materials; CSR support for public schools.	One steady B2B line, a small content-driven line, and a sponsorship line that widens access.
Key Resources	Curriculum-aligned feedback framework; AI continuity-checking engine with fact attribution; secure cloud infrastructure; development team; parsed materials library; age-appropriate content-safety guidelines.	The library and framework grow more valuable as teachers upload. These are what a bigger company cannot copy quickly.

Block	What it says	Why it is there
Key Activities	Curriculum development; teacher outreach and onboarding; app development; AI integration and prompt engineering; data security; material parsing and rights verification; designing content-safety and conflict-resolution prompts; moderation review.	The recurring jobs needed to keep the product, the archive and the safe space working.
Key Partners	DepEd-aligned schools and universities; cloud hosting providers (AWS/Google Cloud); invoicing and payment providers; AI/LLM API provider.	Schools are the buyers. The others supply infrastructure and AI you will not build yourself.
Cost Structure	Cloud hosting; AI API costs; developer salaries; cybersecurity; curriculum development; archive curation and tagging labor; content-moderation API and teacher-review support.	AI usage scales with students, so it is the main cost to watch. Moderation is a new, smaller cost.

How the blocks connect (the story to tell)

Teachers adopt because feedback and group grading get easier and the space is safe for their students (Value Proposition). Schools pay a license (Revenue). The materials teachers upload make the archive better (Key Resources). A better archive attracts more teachers (Channels). Marketplace fees and CSR support add income while school contracts are slow. Keep this loop in mind; it is the answer to "how do the nine blocks work as one model."

Part 3 — Numbers and Facts to Memorize

Fact	Detail
Learning poverty	About 91% of Filipino 10-year-olds (World Bank/UNESCO)
PISA 2022 reading rank	77th of 81 countries; 347 vs about 476 OECD average (OECD)
DepEd's framing	Five to six years behind (Rappler, Dec 7, 2023)
AI cost estimate	$0.02–$0.05 per check, about 20 checks per student per month, so about $0.40–$1.00 per student per month
Projected license fee	₱50–100 per student (a Stage 1 estimate, not a quote)
School procurement cycle	Typically 6–12 months
Business organization	Corporation, six co-founders, SEC-registered, "Inc."
SDGs	SDG 4 Quality Education (primary, including target 4.7 on a culture of peace and non-violence); SDG 16 Peace, Justice and Strong Institutions (secondary); SDG 9 Industry, Innovation and Infrastructure; SDG 10 Reduced Inequalities. SDG 8 was dropped with the indie segment.
Wattpad reach in the Philippines	About 7 million people per month (Adobo Magazine, 2019). Use this figure; do not claim a global ranking you cannot source.

Say "estimate" every time you quote the cost and license numbers. They are directional Stage 1 figures. The dollar cost against a peso fee mixes currencies, so be ready to state the exchange rate you assumed.

Why a Corporation (know all of it)

- Six co-founders need shared ownership; a stock Corporation allows 2–15 incorporators under the Revised Corporation Code (RA 11232).
- Limited liability protects founders' personal assets, which matters because the platform holds student data.
- Schools expect to contract with a formally registered entity.

- New investors can be issued shares later without restructuring.
- Not a sole proprietorship (one owner), not a partnership (unlimited joint liability), not an OPC (exactly one stockholder). “LLC” is a U.S. term, not a Philippine structure.

Part 4 — Risks and Honest Limits

A defense goes better when you name your own weak points before a panelist does. These are acceptable for Stage 1.

Weak point	Why it is a weakness	What you say
No working prototype	Cross-author checking is a claim, not yet a demonstration.	Stage 1 is a concept. Our proof-of-concept is two planted-author paragraphs with one contradiction, run through an LLM and documented.
AI accuracy	A wrong flag erodes trust with teachers and students.	The tool asks, it never corrects. The student decides. Accuracy is the first thing we test.
Content filter errors	Filters over-flag and miss things.	Flags go to the teacher, who decides. We support supervision; we do not replace it.
Over-claiming on values	Panelists will ask for evidence that this teaches peace.	We claim structured practice in respectful disagreement, not violence prevention. Literacy stays the lead problem.
Creative-writing inference	Citations measure reading, not creative writing.	It is our reasoned inference from the literacy gap, and we say so openly.
Slow school sales, one revenue anchor	Procurement takes 6–12 months and there is no consumer line now.	Pilot school, free archive access, marketplace fees, CSR support and lean costs. We name this as the main business risk.
Unit economics are estimates	No real pricing or usage data yet.	They are directional. Detailed CAC, LTV and break-even belong to later stages.
Upload copyright	Teachers may upload material they do not own.	Attestation at upload, default private, review before public sharing, fast takedown, uploader indemnifies false claims.
Student safety and data	Minors' writing and data are sensitive.	School-scoped accounts, guardian consent notice, minimal data, Data Privacy Act (RA 10173) applies; cybersecurity is a listed cost.

Part 5 — The Safe, Respectful Story Space

A claim you can defend

Do not claim the tool prevents violence such as school shootings; no evidence supports that and a panelist will ask for it. The defensible claim is narrower: KwentoHabi gives students structured, repeated practice at disagreeing respectfully, resolving conflict, and being consistent and accountable, inside a space designed to be age-appropriate and teacher-controlled.

Use the wording “age-appropriate and teacher-controlled,” never “no violence ever.” Works like Noli Me Tangere contain violence, and a zero-violence rule would be unworkable and read as censorship.

How each feature works

- **Respect:** When one student contradicts another, each writes a short Perspective Note with AI sentence starters, acknowledging the classmate's version before explaining their own. Only that story thread pauses.
- **Peacemaking:** After the notes, students choose a Resolution: merge the versions, keep both as an intentional difference in perspective, or ask the teacher. The teacher dashboard logs how each group resolved it.
- **Discipline:** Contribution deadlines and a weekly record of who contributed what. Any streak is optional, teacher-controlled and group-level.
- **Content control:** The teacher sets the content level (strict default for junior high). The AI screens for graphic violence, self-harm, sexual content and hate. Flagged passages go to the teacher, not auto-deleted; the student sees a friendly prompt to rework or ask the teacher.
- **Distress routing:** Writing that suggests distress goes to the teacher or guidance counselor, with no diagnosis and no automatic punishment.

Limits to say out loud

- Filters make mistakes; the teacher stays in the loop.
- KwentoHabi is a writing tool, not a mental health or discipline system.
- Literacy is the lead problem. Respect and peacemaking are how the product works and a secondary SDG 16 contribution.

Verify before citing

- Data Privacy Act of 2012 (RA 10173) and what it requires for minors' data.
- Anti-Bullying Act of 2013 (RA 10627) and DepEd's child protection policy; do not claim compliance or bullying detection.
- The exact wording of SDG target 4.7 before quoting it.
- Any statistic about youth violence. None is cited in the canvas, and the incidents mentioned in discussion have not been verified here.

Part 6 — Self-Quiz

Cover the answers and say each one out loud. Short answers only; full versions are in the Defense Cheat Sheet.

Q: What does KwentoHabi do in one sentence?
A: It checks Filipino students' writing against a teacher's materials and flags contradictions between co-authors, in an age-appropriate, teacher-controlled space.

Q: What is the single biggest differentiator?
A: Cross-author continuity checking, which reconciles facts across different students and sessions.

Q: Why not ChatGPT?
A: It has no class roster, rubric, memory of past work, or way to reconcile several authors. Our moat is the workflow, not the model.

Q: Does the AI rewrite student work?
A: No. It flags and asks whether the change was intentional.

Q: Who pays?
A: Schools and universities through institutional licensing. Marketplace fees on teacher materials and CSR support are secondary.

Q: How do you survive a 6–12 month sales cycle?
A: Pilot school, free archive access, lean costs, marketplace fees and CSR support. We admit non-license income is small.

Q: Does it prevent violence?
A: No, and we never claim that. It gives structured practice in respectful disagreement.

Q: Do you ban violence in stories?
A: No. Content is age-appropriate and teacher-controlled; flagged passages go to the teacher.

Q: How is a contradiction resolved?
A: Perspective Notes from both students, then merge, keep both as intentional, or ask the teacher. The teacher sees the log.

Q: What is the biggest cost?
A: AI API usage, which scales with students.

Q: Why a Corporation?
A: Six co-founders, shared stock ownership, limited liability, and the legal standing schools expect.

Q: Why not an OPC?
A: An OPC allows exactly one stockholder; we have six.

Q: How is this different from DepEd's Learning Resource Portal?
A: The portal stores materials. We parse them into standards the engine checks student work against.

Q: Is writing really where the gap bites hardest?
A: That is our inference from the literacy data; no cited source measures it directly.

Q: Which SDGs, and which is primary?
A: SDG 4 primary; SDG 16 secondary; SDG 9 and 10 supporting.

Q: Why did you remove indie authors?
A: Focus, and an open adult audience conflicts with a safe space for minors.

Q: What would you do next?
A: Run the proof-of-concept, interview teachers, and refine unit economics.

Q: Is this a finished business?
A: No. Stage 1 asks for a defensible starting concept to be developed, tested, challenged and improved.

Part 7 — Pre-Submission Checklist

☐ The company name is identical on the canvas header, the proposed title and the write-up (all KwentoHabi, or all LoreWeave).

☐ “Corporation” appears on the canvas header and the closing paragraph; no “LLC” remains anywhere.

☐ Figure 1 is the final canvas: no indie authors, freemium, Discord, TikTok or Reddit left, and the safe-space and content-moderation lines present.

☐ The canvas export is clean: no stray dots, no leftover teal circle, no clipped text such as “ge-appropriate.”

☐ The write-up paragraph mentions cross-author checking, materials benchmarking and the age-appropriate, teacher-controlled space.

☐ SDG list in the write-up matches the reviewer: 4, 16, 9, 10 (no SDG 8).

☐ No sentence claims the platform prevents violence or school shootings.

☐ Legal references (RA 10173, RA 10627, DepEd child protection policy, SDG 4.7 wording) are verified before being cited.

☐ Punctuation is clean: em dashes present, no doubled periods, no space before a period.

☐ Content fits the page limit, title page excluded.

☐ Every speaker has rehearsed aloud, and each can answer two or three questions outside their own section.

☐ The group can say the one-sentence summary from memory.
